

Canyon Bryson

AI Engineer · Full-Stack Developer

Draper, UT · 385-427-4849 · canyonbryson@gmail.com · www.canyonbryson.com

SUMMARY

AI Engineer and Full-Stack Developer with 7 years of experience shipping production systems end-to-end. I believe the writing code using repeatable and robust patterns will significantly speed up development, reduce mistakes, and ensures a consistent UX.

CORE COMPETENCIES

Competitive Advantage: Creative problem solving · Pattern recognition · Abstract reasoning · Logical deduction · Attention to detail

Engineering Philosophy: Repeatable, robust patterns · Abstractions reduce uncertainty + rework · Reusable code is easier to maintain · Strong typing + clear specs

Full Stack: Next.js / React · React Native + Expo · Flutter + Riverpod · TypeScript · Node.js · PostgreSQL · DynamoDB + MongoDB · Git · Express.js · Turborepo

High-Level Vision: Build software to enable viral growth, high margins, and low churn · Reduce rework with clear constraints · Pay down tech debt intentionally

AI Integration: Define constraints + guardrails · Provide patterns to follow · Evaluate outputs consistently · Iterate prompts/rules until reliable

Infrastructure: AWS · Vercel · Docker · CI/CD · Convex · Supabase · Github Actions · OpenRouter · Custom AI Tools · Clerk

EXPERIENCE

JOB TITLE	COMPANY	
Lead Engineer	OrthoAthlete	OCT 2024 – Present
- Built **INJURED**: athlete recovery platform across mobile + web with real-time sync - Shipped **OrthoHCP** (AI video interviewer for provider onboarding) in 30 days from zero to production - Developed many more projects like **OrthoAgent**, **OrthoData**, **OrthoAthlete**, and **OrthoPatient**		
Lead Developer	Riddler Road Rally	March 2024 – July 2024
- Sole developer for interactive scavenger hunt platform (web + mobile) - Implemented real-time multiplayer features using serverless AWS architecture		
Software Developer	AIDIA	May 2022 – May 2024
- Full-stack delivery across React, Astro, and SolidJS on multiple architectures (SQL/NoSQL, event-driven) - Built custom image recognition systems, automation tools, and mobile apps - Trained and mentored new hires on software best practices and SOPs		
Networking Developer	Utah State University	August 2023 – March 2024
- Built internal tools for the networking team using Django and React - Maintained PostgreSQL-backed systems and dashboards		
USU BioTech Research Assistant	Utah State University	2020 – 2023
- Developed a 3d printed ChemoStat using a raspberry pi and a various sensors to measure the pH, temperature, and syphon rate of a solution - Developed hands-on science projects for students, such as a programmable 3D printed prosthetic hand (not useful as a prosthetic) and a mini bioreactor out of a mason jar and Arduino		

JOB TITLE

COMPANY

2021

USU Water Quality Research Assistant

Utah State University

• Developed prgrammable solutions for water quality monitoring and analysis

• Programmed raspberry pis, arduinos, and developed PCBs and sensors

JOB TITLE

COMPANY

2022 – Present

Freelance Developer

Independent

• Delivered client-facing web apps and automation tools for small teams

• Owned discovery, build, and delivery from prototype to production

EDUCATION

DEGREE

SCHOOL

May 2024

B.S. Computational Mathematics

Utah State University

Computer Science Minor · GPA 3.71 · ACT 34

Scholarships/Grants: URCO (Undergraduate Research Grant) Recipient · Regent's Scholarship Recipient · Presidential Scholarship Recipient
